

perennial

# The business behind the work, in one place.

Perennial is a single, connected workspace for an independent design practice — clients, projects, money, and reputation, all aware of each other.

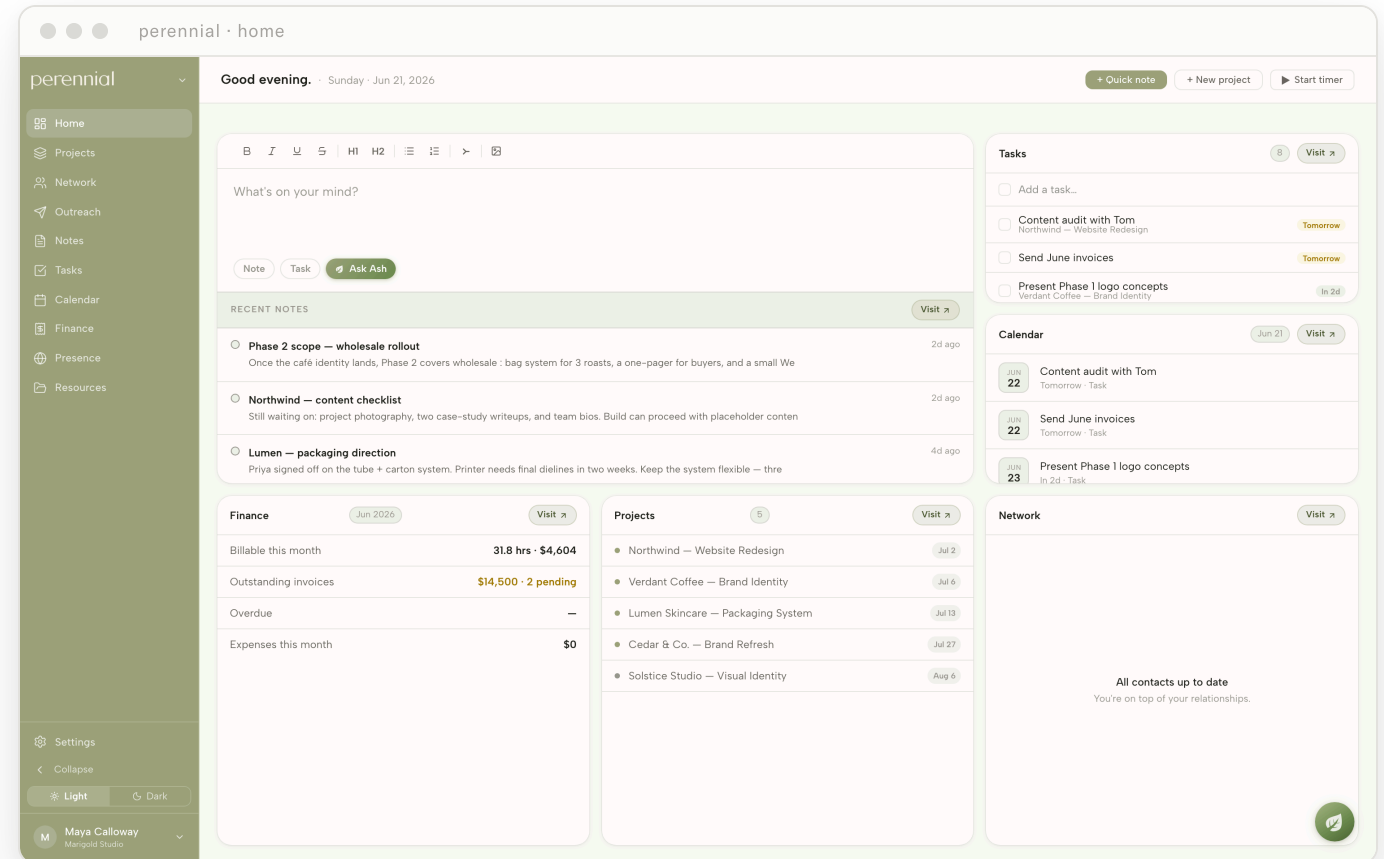

PRODUCT WALKTHROUGH · **APP.PERENNIAL.DESIGN**

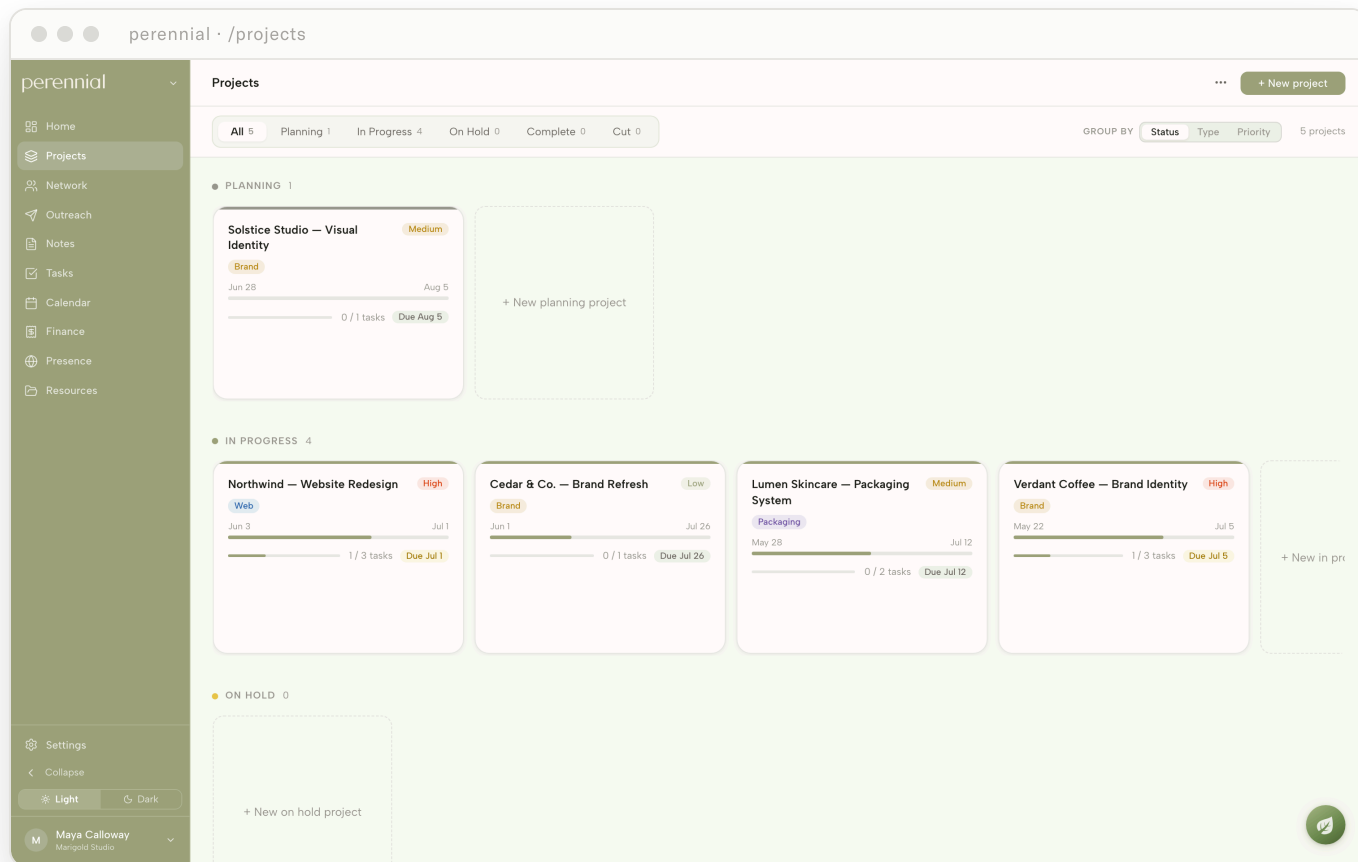

## HOME

# The whole studio, on one screen.

Due, owed, and at-risk — pulled live from your projects, tasks, finance, and the people you work with. Open the app and you already know **where things stand**, without checking four other tools.

TASKS · INVOICES · PROJECTS · NETWORK

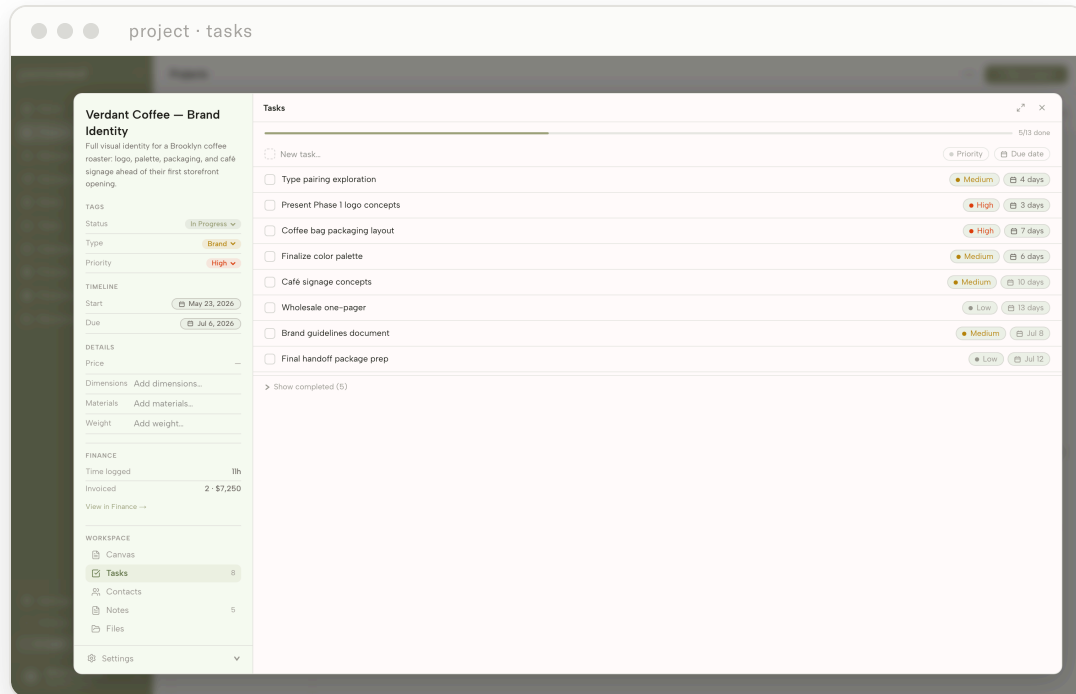

## PROJECTS

# Every project, at a glance.

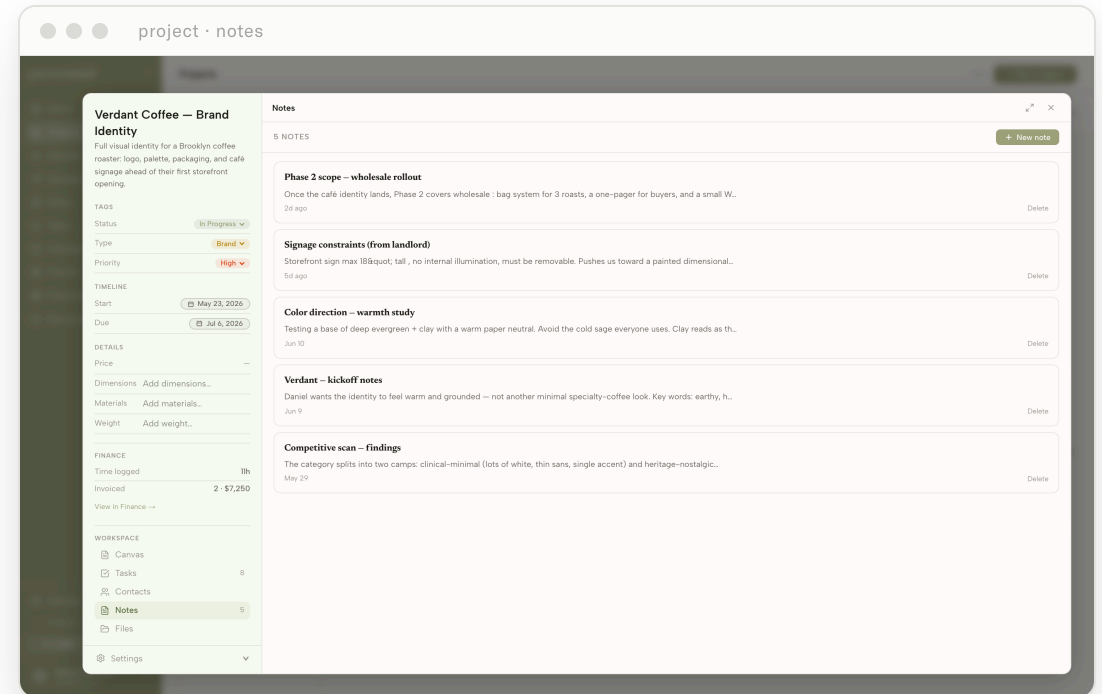

Type, status, client, and value on every card. Progress **rolls up** **automatically** from the tasks underneath — so the board is always current without a status spreadsheet to babysit.

# Open one, and everything's in context.

Tasks, notes, files, time, and the people on a project all live in a single panel. The hours you log here become **billable time**; the work becomes an **invoice**. Nothing is filed in a separate app.

**Tasks** — 5 of 13 done, with due dates and priority

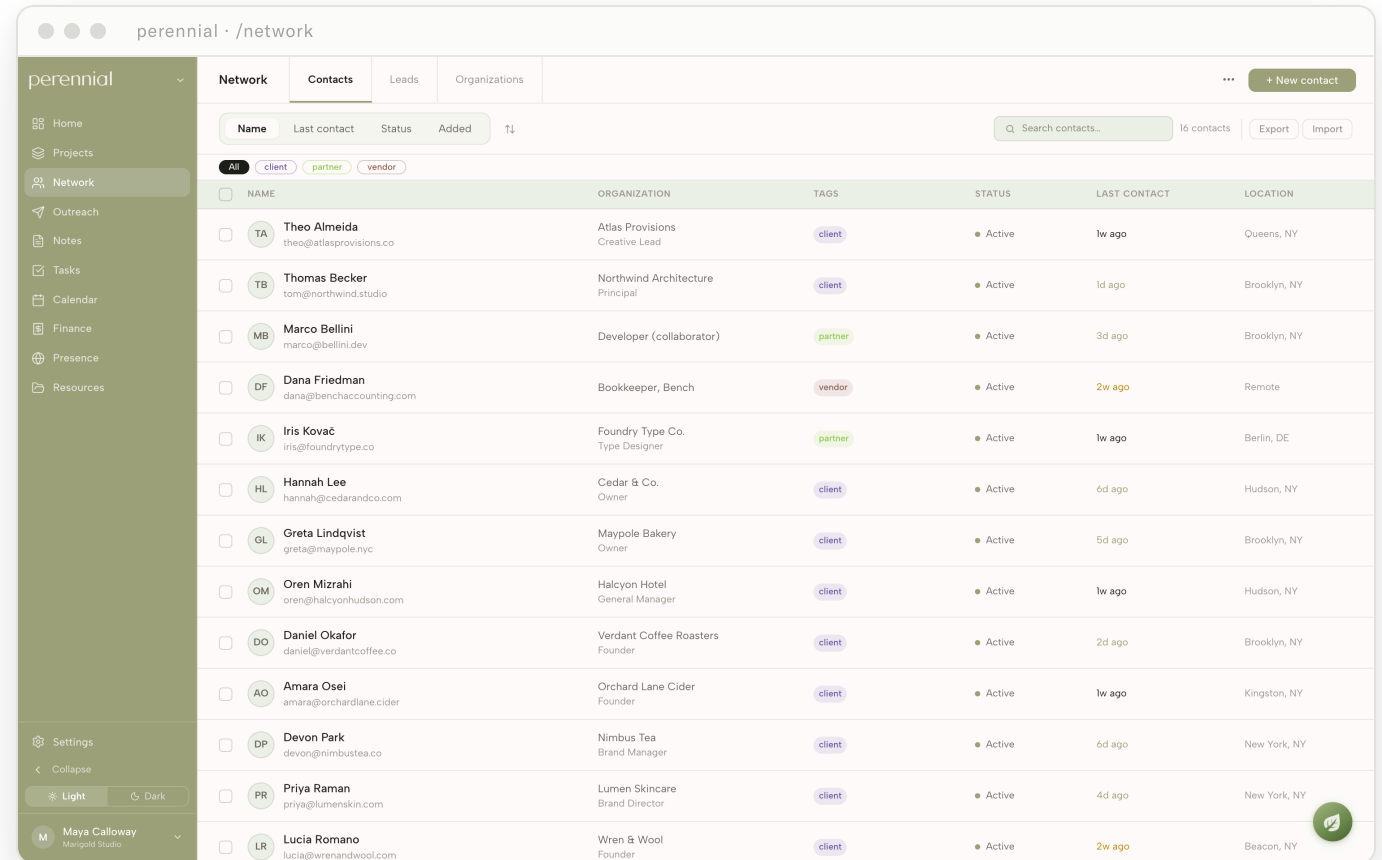

**Notes** — research, direction, and scope, kept with the work

## NETWORK

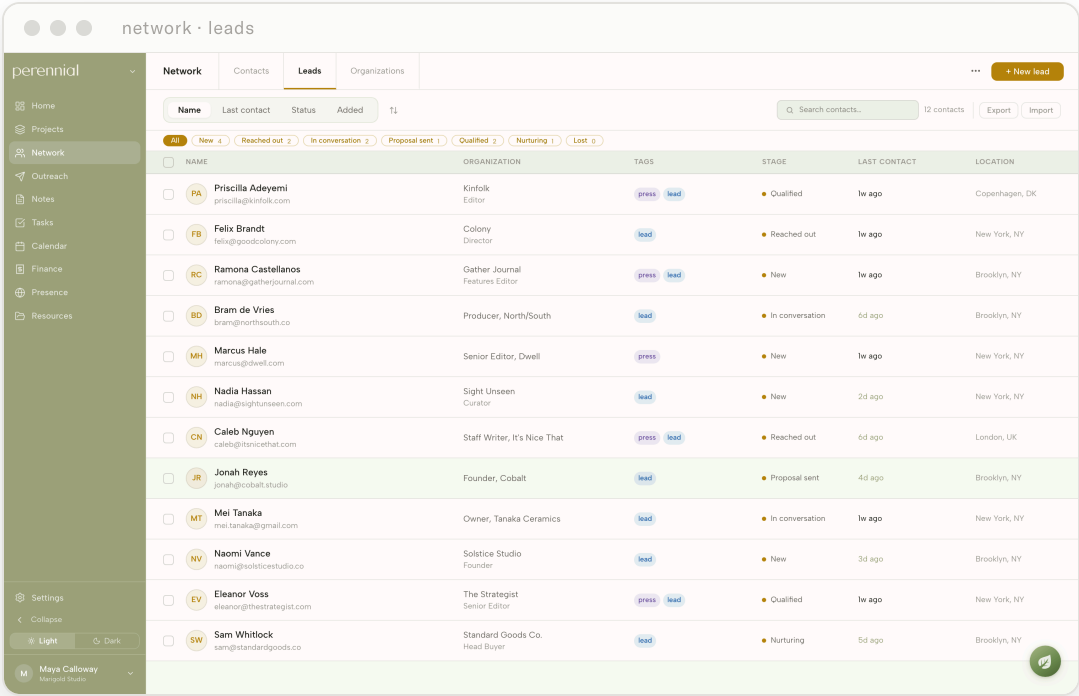

# Everyone you work with, connected.

Clients, collaborators, press, and vendors in one CRM — each linked to **their organization** and the **projects** you've done together. The studio's whole world, in one searchable list.

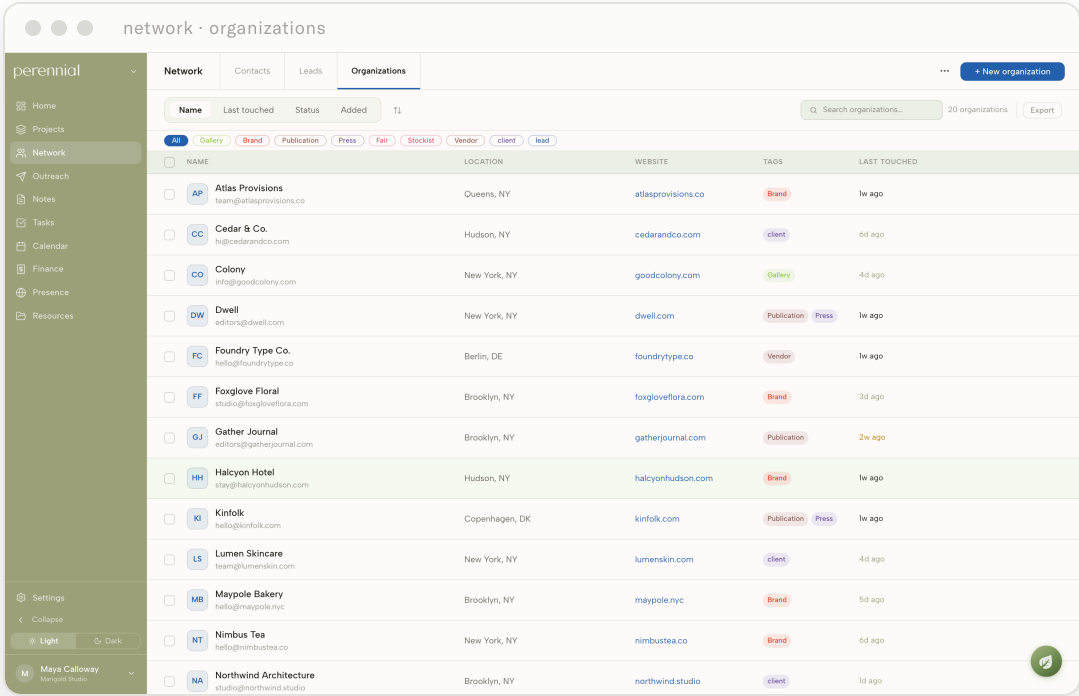

# Relationships move through stages.

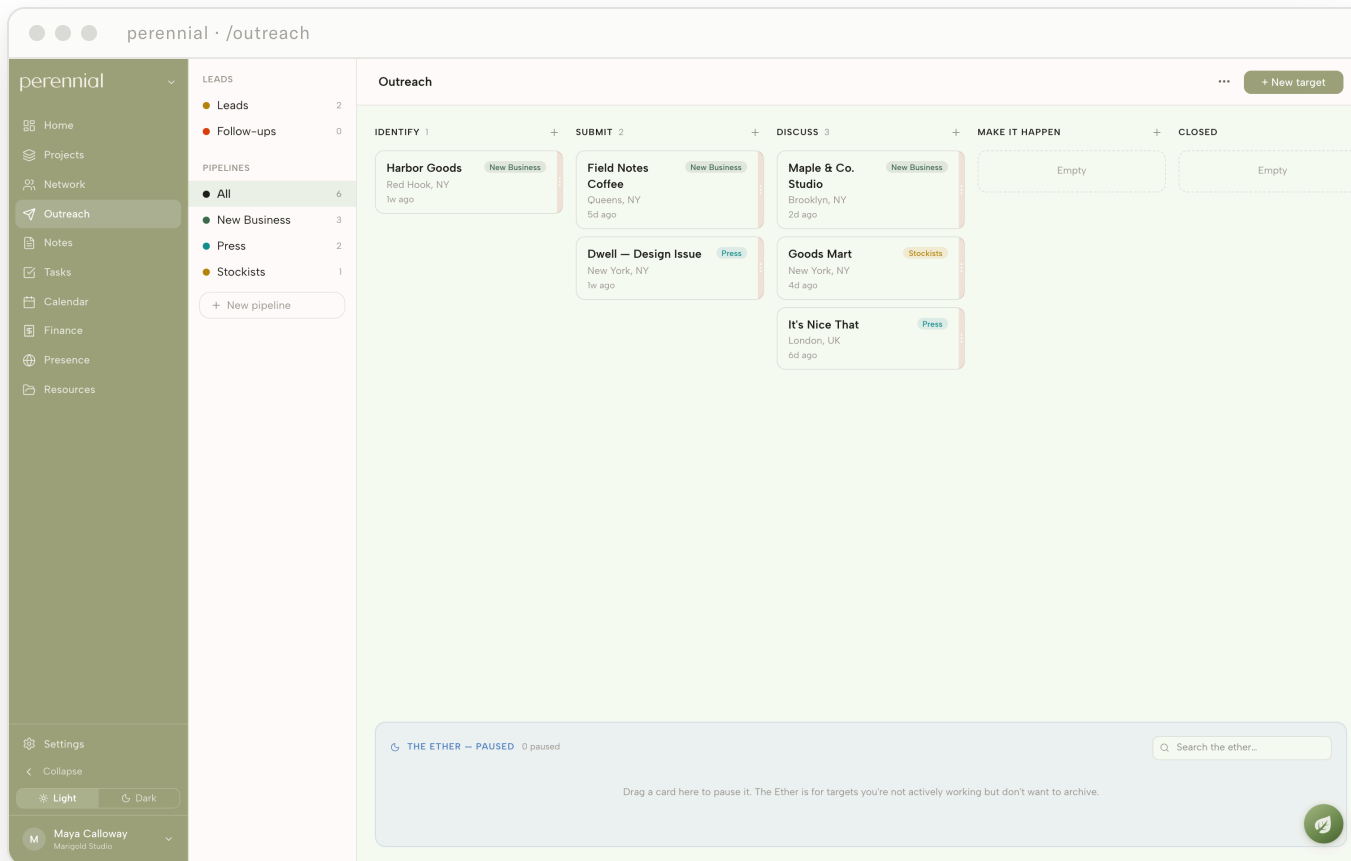

New business, press, and stockists run through the **same simple pipeline** — first contact to qualified — while the companies behind them stay organized by type. The same person can be a client, a lead, and a press contact, and the app keeps it straight.

Leads — by stage, new business and press alike

Organizations — brands, publications, galleries, vendors

## OUTREACH

# Turn contacts into momentum.

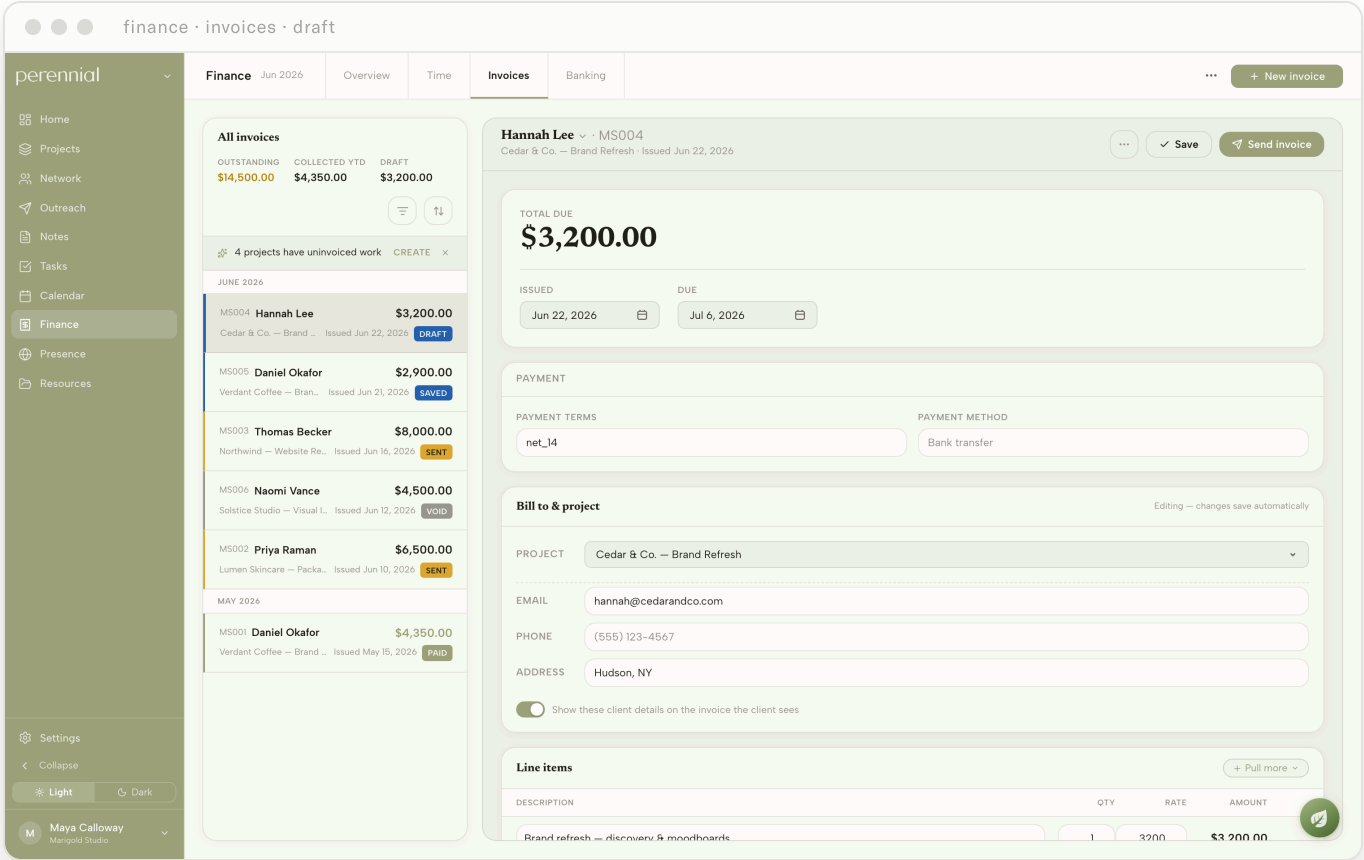

Visual pipelines for chasing press, galleries, stockists, and new business. Drag a target to **“Published”** and the win flows straight into your Presence — the same relationship, tracked end to end.

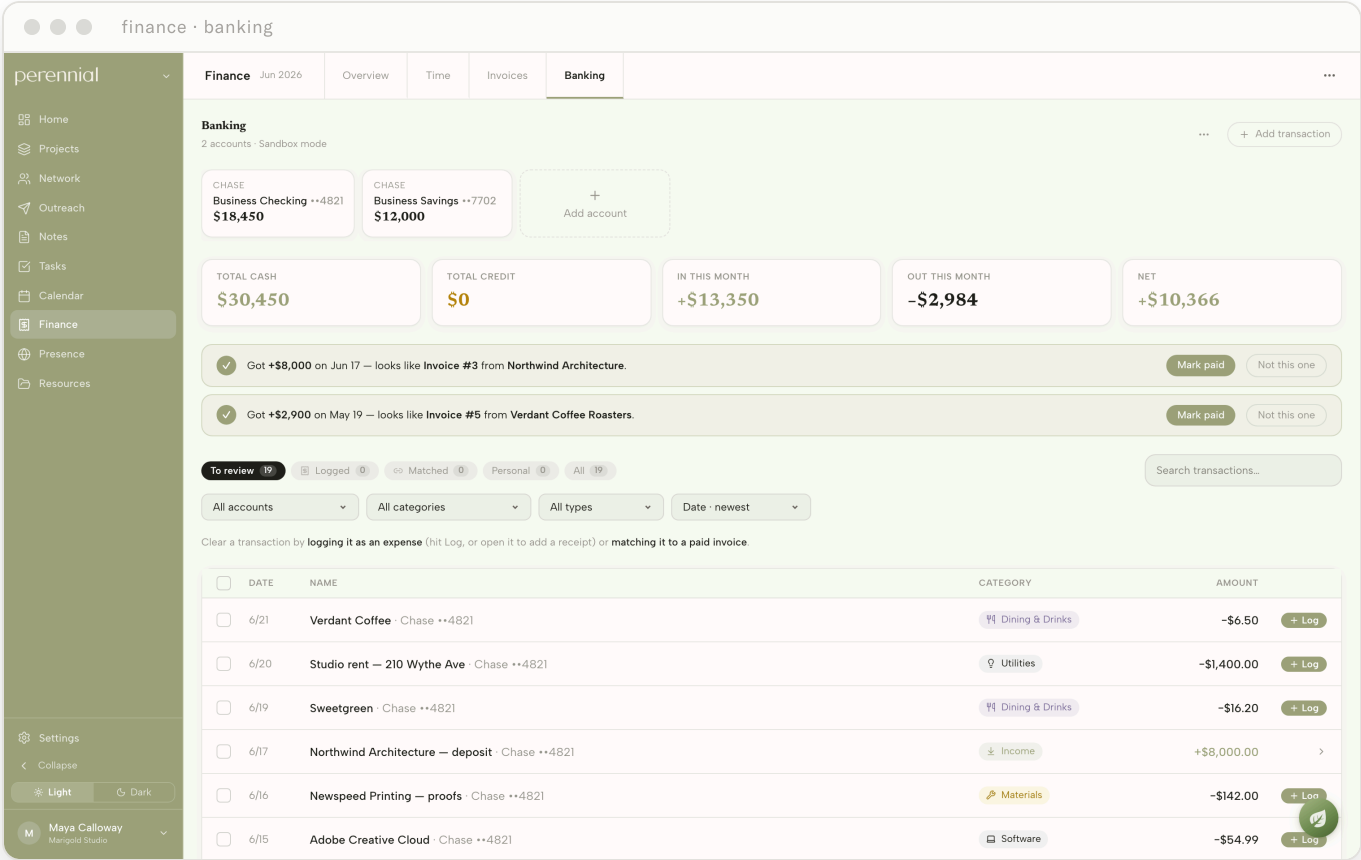

FINANCE • INVOICES

Invoice straight from the work.

A new invoice already knows its **client, project, and rate** — because the rest of the app does. Send it, and clients pay online through Stripe, with the money landing **in your own account**.

PROJECT → INVOICE → PAYMENT

FINANCE · BANKING

The money reconciles itself.

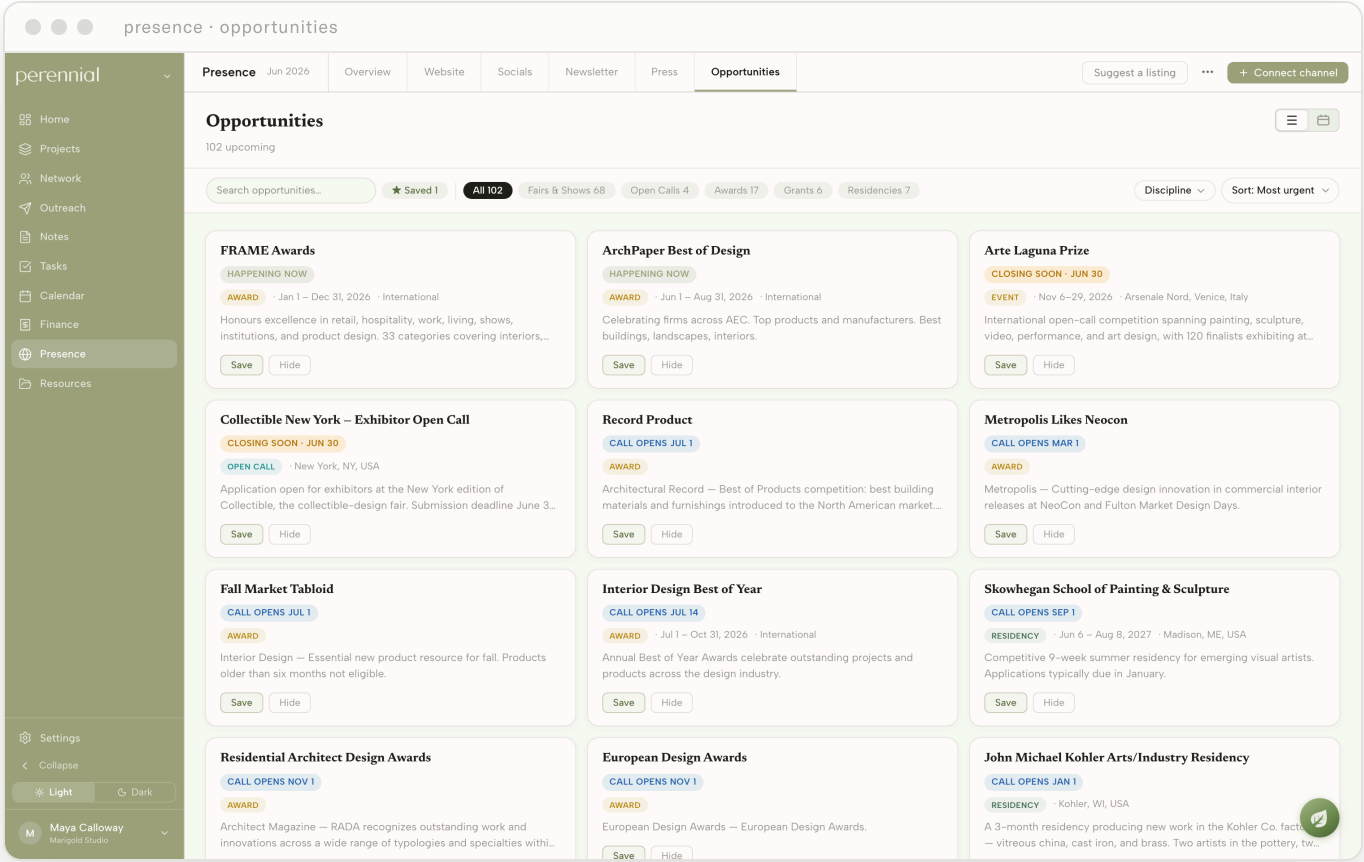

A live bank feed via Plaid, auto-categorized — and **matched back to the invoice that earned it.** “Got +\$8,000 — looks like Invoice #3 from Northwind.” The loop from work to paid closes on its own.

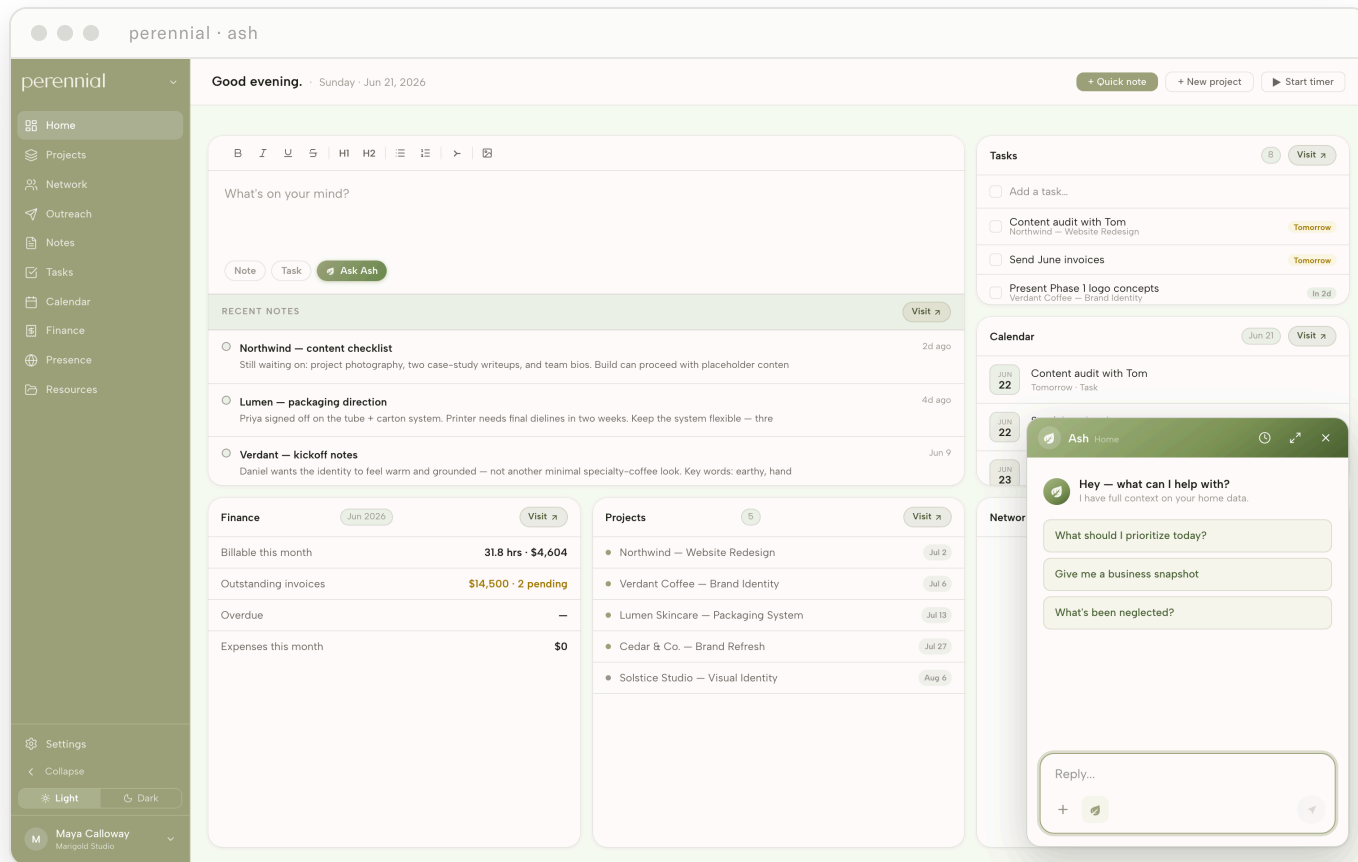

PAYMENT → BANK FEED → MATCHED

PRESENCE · OPPORTUNITIES

# Grow the practice.

A curated feed of **fairs, open calls, grants, and awards**, filtered for independent studios. Save the ones worth chasing and they flow into your calendar and outreach — reputation, treated like pipeline.

ASH · AI ASSISTANT

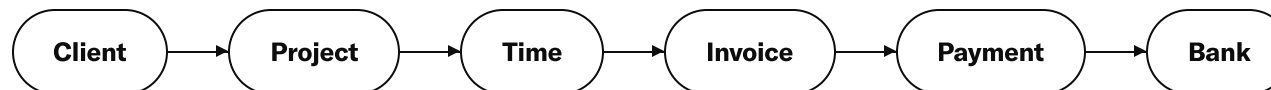

# An assistant that knows your studio.

Because everything is connected, Ash has **real context** — your clients, projects, and cash flow. Ask it what to prioritize, or to draft a client update, **without explaining a thing**.

THE IDEA

# One connected system.

Most tools make you stitch these together by hand. Perennial models them as a single graph — so the studio runs itself a little more, and you get to design a little more.

DESIGNED & BUILT END-TO-END · **APP.PERENNIAL.DESIGN**
